

Diamond 9 to the human outline

Fifteen-minute interactive session · run sheet

Aim. Surface what teachers think AI literacy is, map what we actually want a pupil to become, then reveal a curriculum built around the second.

Kit. Cut Diamond 9 sets and placement mats on each table, human outline worksheets, red and green pens, the reveal slide cued and ready.

TIME	PHASE	WHAT YOU DO AND SAY	WATCH FOR
0:00	Frame	One line, no preamble. We're going to rank what AI literacy is, then test that against what we want a pupil to become.	Keep it to two sentences. Don't explain the activity.
0:30	Diamond 9	Cards are already out. Tables arrange the nine into the diamond, most important at the top. Three and a half minutes. Just place them, no debate yet.	If a table stalls, tell them to put anything up top and adjust. Movement beats deliberation.
4:00	Share and justify	Pick one table. Ask for their top card, their bottom card, and one sentence of why. Then a show of hands: who put AI Companions in their top three? Who put The Environmental Cost?	Don't poll all nine. Two contested cards is plenty. The disagreement is the content.
6:30	The human outline	Switch to the worksheet. Two minutes: write the characters, skills and virtues you want a KS3 pupil to develop. Their own words, as many as they can get down.	Push for quantity. Tell them not to overthink the wording.
8:30	Annotate	Red for the ones most at threat from AI. Green for the ones AI can amplify. Both where it could go either way.	Most pens will hover over both. That hesitation is the point arriving on its own.
11:00	The both list	Ask the room which ones they marked both. Collect three or four out loud. Then land it: whether AI threatens or amplifies these comes down to how you set the task.	This is the hinge. Say it once, slowly, and let it sit.
13:00	The reveal	Show your curriculum. Point out it's built around the human capacities they just wrote, not the AI topics they ranked first. Close the loop: the order you build in is the argument.	End on the principle, not a tour of lessons.

The one thing: the order you build in is the argument. Intent first, then pedagogy, then tools.
